Goal-oriented technology professional operating at the intersection of software development, cybersecurity and technology consulting. Experienced in translating business needs into practical, secure digital solutions, spanning client engagement, solution scoping, development and delivery. Passionate about building systems that simplify work, improve outcomes and create meaningful value, with a particular interest in financial services, financial technology and the secure digital transformation of the industry.

EDUCATION

Northumbria University, Newcastle
2026
BSc (Honours), Networks and Cyber Security
First Class Honours

King's College London
2023
Foundation Year
Economics and Mathematics

Modern Knowledge Schools, Bahrain
May 2022
American High School Diploma
GPA: 98%

EXPERIENCE

Central Bank of Bahrain | Graduate Trainee, GP15 Programme | Oct 2026 – Present
- Selected for a highly competitive six-month graduate training programme with a direct pathway into the Central Bank.
- Placed in the Cybersecurity Unit for the first rotation, followed by the Supervisory Technology Unit.

Blank State Labs | Founder and Lead Developer | Oct 2026 – Present
- Founded a Bahrain-based software engineering and consultancy firm building bespoke digital solutions.
- Lead client engagements end to end, from scoping and solution design to delivery, across web platforms, internal systems and AI automation.

Investcorp | Information Security Intern, Nemir Kirdar Internship Program | Jul 2026 – Aug 2026
- Threat-modelled an in-development AI system against the OWASP Top 10 for LLM Applications and MITRE ATLAS, prioritising risks and presenting architecture-level mitigations to the development and management teams.
- Developed the Minimum Baseline Security Standard (MBSS) for Azure Databricks, defining critical production controls across identity, data access, networking, compute, monitoring and AI/ML.
- Conducted alert triage and investigations in Sophos Taegis XDR, with hands-on work across Proofpoint TAP/CTR/TRAP and SailPoint IAM.

JABA | Software Engineering Consultant | Jun 2026 – Aug 2026
- Engineered and delivered the corporate website and internal operations system for a Saudi tailor-made travel operator, from design to launch.
- Worked with stakeholders through discovery and iterative feedback cycles, translating business requirements into UX, product and technical decisions.

INDUSTRY CERTIFICATIONS

Claude Certified Architect
Anthropic | Foundations | 2026

eJPT: Junior Penetration Tester
INE | August 2026

CC: Certified in Cybersecurity
ISC2 | August 2025

COAE: Certified Offensive AI Expert
HTB | *In progress*

HONOURS AND AWARDS:

- **Rwad Scholarship Recipient | 2022–2026**
- **Innovation Award | Anthropic x Accenture Hackathon | May 2026**

SIDE PROJECTS

AI Security Agents: Penetration Testing Copilot and URL Triage Agent | May 2026 – Present
- Built an agentic copilot that drives a penetration tester through the full kill chain, with persistent on-disk memory across sessions.
- Built an autonomous URL triage agent that investigates a link across ten tools and returns a verdict, confidence score and evidence in seconds.
- Use both tools regularly and continue to refine them for personal use and learning.

CTFs, Penetration Testing, and Defensive Security | Dec 2025 – Present
- Conducted vulnerability assessments on Vuln VMs and OWASP Juice Shop using tools such as Nmap, and Burp Suite. Reported findings, impact, and remediation.
- Implemented defensive controls (iptables rulesets, Snort IDS/IPS rules, OS hardening) and executed controlled credential testing with Hydra.
- Independently completed offensive security CTF challenges including Windows/Linux exploitation, privilege escalation, web application attacks, and password cracking.

Sweaty: Video Game Social Platform | Oct 2025 – Present
- Building a social platform mobile app to track what you're playing, rate games, write reviews and share your gaming journey. Full-stack TypeScript across a React Native client, a Next.js 16 web layer on Vercel, and Postgres handling auth, storage, real-time interactions and activity feed.
- Self-audited the codebase, closing IDOR, PostgREST injection and email-enumeration vulnerabilities, with row-level security on every Postgres table, server-side session validation, and HMAC-signed OAuth.

TECHNICAL SKILLS

Languages and Scripting: Python, JavaScript/TypeScript, Swift, Rust, PHP, HTML, Bash, SQL.
Frameworks and Tools: React (Native), Next.js, FastAPI, Astro, Svelte; Supabase, Vercel, PostgreSQL, Docker, VMware, Git/GitHub, Microsoft 365.
Offensive Security: Nmap, Burp Suite, Metasploit, Wireshark, CrackMapExec, Hydra, ffuf, enum4linux; Kali Linux.
Defensive and Standards: Snort, iptables; GNS3, Cisco Packet Tracer; MITRE ATT&CK & ATLAS, OWASP Top 10 (LLM), Sigma.
AI/ML: Jupyter, Google Colab, pandas, NumPy, scikit-learn, PyTorch/Transformers; Claude Code, Claude API & MCP (agentic tool use).
